

SiC-based UV photodiode

Model ST-ABC-L

General Features:

- Broad band UVA+UVB+UVC photodiode
- Photovoltaic mode operation
- TO-46 metal housing
- Good visible blindness
- High responsivity and low dark current

Applications: UV index monitoring, UV radiation dose measurement, flame detection

Specifications:

Parameters	Symbol	Value	Unit
Maximum ratings			
Operation temperature range	T_{opt}	-55-200	°C
Storage temperature range	T_{sto}	-55-200	°C
Soldering temperature (3 s)	T_{sol}	260	°C
Reverse voltage	$V_{r\text{-max}}$	-20	V
General characteristics (25 °C)			
Chip size	А	1	mm²
Dark current (V _r = -5 V)	I _d	<10	рА
Temperature coefficient (@265nm)	T _c	0.065	%/°C
Capacitance (at 0 V and 1 MHz)	Cp	97	pF
Spectral response characteristics (25 °C)			
Wavelength of peak responsivity	р	275	nm

Peak responsivity (at 27514(0 0 1 72.264 304

SiC-based UV photodiode

Application circuit:

Evaluation circuit board:

A small multifunctional amplifier board for developers to simplify and support application development can be separately provided. The evaluation board with one amplifier channel supports both SMD- and TO-type packaged UV photodiodes supplied by GaNo Opto. Users could select one of the two mounting ports for UV photodiode evaluation, while both ports should not be used that the same time.

The That she valuation board supports measurement range adjustment function via a dip switch. Different setting of the dip switch corresponds to different load resistance value, which determines the amplification magnitude of the signal processing circuit. A temperature sensor on board is used for erhanded temperature compensation.
